Installing a MySQL Client on a Windows Machine

In order to connect to the MySQL database hosted via RDS (created in last video), you need a MySQL client.

Download the MySQL Tools from this link: https://dev.mysql.com/downloads/mysql/ (you don't need to login, simply click the link below the two "Sign up"/"Sign in" buttons!).

After downloading, extract the archive.

You'll find a mysql.exe file in the bin/ folder.

Navigate into the bin/ folder in your command prompt (via cd) and once you're there, you should be able run mysql … in the command line.

We'll run the exact command in the video after this one!
